

## Correlation Matrix

The figure consists of a 10x10 grid of small plots, each representing a different parameter combination. The plots are arranged in a grid where the first column has 10 rows and the subsequent columns have 9 rows each. The x-axis labels at the bottom are 2.0, 2.0, 1 4, 1 4, 1 4, 1 4, 1 4, 1 4, 2.0, and 2.0. The y-axis labels on the left are 1, 1, 1, 2.0, 1, 1, 1, 1, 1, and 1. Each plot contains numerical values in a 2x2 grid, with 'AMP' written in the top-right corner of most plots. The values in the plots show varying trends across the parameter space.
